Message from the Guest Editor

Dear Colleagues,

The academic study of the epidemiology of allergy has undergone a transformation over the last 20 years, from around 150 citations of "epidemiology and allergy" in 1995 to over 8500 in 2016. Epidemiological studies have laid the ground work for examining a range of exciting theories, as well as acting as hypothesis generating tools. Highlights have included probing the ubiquity of the hygiene hypothesis, exploring the nexus with gut and skin flora, examining the timing of introduction of allergens to diet, genetic factors and exposure to greenspace/more natural environments altering risk of allergy. The epidemiology of allergy is increasing flagged as important in the large populations of developing economies, with increasing urbanisation seeing a fundamental shift in exposures.

We are organizing a Special Issue on the epidemiology of allergy. For detailed information about the special issue, we refer you to http://www.mdpi.com/journal/ijerph/special_issues/The_Epidemiology_of_Allergy.

Author Benefits

- **Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.
- **High visibility:** indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed) and other databases. Full-text available in PubMed Central.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 27 days after submission; acceptance to publication is undertaken in 5 days (median values for papers published in this journal in first half of 2017).
