Special Issue

Improving Safety, Health, and Wellbeing in Construction

Message from the Guest Editors

Apart from the dangers of the jobsite front-line, workers in the construction industry are also exposed to other potential health hazards throughout the building process. Many of the occupational hazards of site workers have not been accurately assessed; it is clear that workers are exposed to both acute and chronic illnesses at their primary workplace. Although construction work is inherently dangerous and highly prone to stressful environment, many risks/hazards can be avoided by appropriate implementation of safe work practice. Therefore, it calls for a persistent endeavour to evaluate, develop, and execute innovative approaches in improving health, safety, and wellbeing in the construction industry. This Special Issue will engage technological, managerial, cultural, and organizational perspectives in managing safety and health risk/hazard in construction and is open to any subject area relevant to construction safety and health. The listed keywords suggest just a few of the many possibilities.

Author Benefits

- **Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.
- **High visibility:** indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed) and other databases. Full-text available in PubMed Central.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 27 days after submission; acceptance to publication is undertaken in 5 days (median values for papers published in this journal in first half of 2017).
