Message from the Guest Editors

Extreme weather events are weather events that are significantly different from the usual weather pattern, based on local historical distribution seen in the past. According to the latest IPCC Assessment Report, changing patterns of climate will bring more frequent and severe extreme weather events, leading to more burden of disease. However, research on extreme weather events and health, including the impacts, mechanisms and responses, is still limited, especially in low-resource settings where people are most vulnerable. We call for studies that address this global challenge. We aim to provide more evidence to public health policies and interventions that could reduce health risks associated with extreme weather events. We welcome your submissions, especially research on low-resource settings.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
