Facts about the MDPI Community

70 open access journals
70 staff at your disposal
4000 academic editors
15,000 articles published
26,000 e-mail alert subscribers
60,000 unique authors
150,000 academic peer-reviewers
600,000 monthly PDF views
2,400,000 monthly abstract views

Call for Papers

Dear Colleagues,

You are invited to contribute a research article or a comprehensive review for consideration and publication in *ISPRS International Journal of Geo-Information* (IJGI) (ISSN 2220-9964). *IJGI*, an international scientific open access journal on geo-information, is jointly published by ISPRS and MDPI online quarterly.

Manuscripts prepared in Microsoft Word or LaTeX can be submitted to the Editorial Office online at www.mdpi.com. Detailed instructions for authors are also available online: www.mdpi.com/journal/ijgi/instructions/

IJGI is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public can unlimitedly access the content for free as soon as it is published.

IJGI is a new journal and publication fees are fully waived for papers submitted in 2012. However, a fee of 250 CHF may apply for those articles that need major editing and formatting and/or English editing.

We would be pleased to welcome you as one of our authors.

IJGI Editorial Office

Aims & Scope

IJGI provides an advanced forum for the science and technology of geographic information. *IJGI* publishes regular research papers, reviews and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced.

Scope:

- data collection and acquisition
- data structures and algorithms
- spatio-temporal databases
- spatial analysis, data mining, and decision support systems
- visualization theory and technology in real and virtual environments
- cartography
- location based services
- uncertainty handling in spatial data
- topology
- geo-computation
- geo-telematics
- spatial information infrastructures
- interoperability and open systems
- applications of geoinformation technology (all possible domains)

IJGI regularly publishes special issues on relevant and timely topics. Be sure to check our website for an updated list of special issues: www.mdpi.com/journal/ijgi/

Open Access. What Does it Really Mean?

Open access is mainly a response to what is known as the serials crisis: yearly increasing journal subscription prices, which make subscription-based journals increasingly difficult to afford.

Many university libraries around the world have had to cancel existing subscriptions, or are unable to keep up with subscribing to new journals, because the cost of publication has risen disproportionately to their budgets.

With open access publishing, the cost of peer-review and production of an article is borne by the institute of the author by payment of a onetime flat fee. Conversely, readers and their institutes are no longer charged for accessing the journals they need.

For researchers, open access brings the convenience of immediate access to the literature that they need—no matter for which university or company they work, or whether they just want to read a paper in their spare time at home.

For authors, open access means a much wider circle of readers due to the easy access to their research papers. The interested general public is also able to access research works, giving higher transparency to the outcome of taxpayer money spent on research.
