Deadline for manuscript  
submissions:

**closed (31 May 2022)**

### Message from the Guest Editors

Multidrug-resistant pathogens, often responsible for severe and incurable infections, are a worldwide concern urgently requiring efforts to find new treatment options. Both Gram-negative and Gram-positive bacilli are emerging as clinically relevant superbugs, often sensitive only to certain natural cationic antimicrobial peptides (AMPs) capable of lethally interacting with bacterial membranes and killing them rapidly, regardless of their drug resistance. More stable and low-cost cationic macromolecules, mimicking AMPs, are continuously synthesized and tested on various pathogenic bacterial species, with the aim of reducing the incidence of fatal infections in both the general population and fragile individuals.

This special issue aims to include articles and reviews on cationic antimicrobial materials and structural strategies to improve their antibacterial activity, selectivity, carrying capacity, as well as studies investigating molecular mechanisms of action. Furthermore, studies of formulations of the developed agents, characterized by antibacterial activity and low cytotoxicity towards mammalian cells, will be welcome.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
