Message from the Guest Editors

Dear Colleagues,

Searching for novel drugs for the treatment of Alzheimer's disease (AD) has become a main task of current developed societies. There novel drug candidates were/are and will be designed, synthesized and tested in many parts of the world. Despite tremendous advances in the understanding of many aspects of AD pathogenesis, there are no proven disease-modifying therapies, and the only available ones are minimally effective symptomatic therapies.

AD is associated with an enzyme acetylcholinesterase (AChE), which is a target for the development of novel drug candidates for these diseases.

In this Special Issue of *International Journal of Molecular Sciences*, we would like to discuss all chemico-biological aspects are behind Alzheimer's disease, and related diseases.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
