Dear Colleagues,

The nuclear factor KB (NF-KB) belongs to a family of transcription factors that are involved in the orchestration of different biological processes. It plays a recognized role in the regulation of immune response and inflammation. However, several studies have shown aberrant activation of NF-**K**B in various solid tumors. Activation of NF-**K**B may result from different signalling pathways triggered by a variety of growth factors, cytokines and tyrosine kinases. Several cell survival genes regulated by NF-KB play a critical role in the development and progression of cancer. Taken together, all studies establish NF-**K**B as an important therapeutic target for the treatment of cancer. This Special Issue on "NF-KB and Cancer" addresses the biology of NF-KB in cancer and its inhibition by various natural products and synthetic agents, leading to tumor growth suppression and clinical development of inhibitors.

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
