Message from the Guest Editors

All three peroxisome proliferator-activated receptor (PPAR) isotypes α , β/δ and γ , function as sensors for fatty acids and fatty acid derivatives, and control important metabolic pathways regulating cellular and whole body energy homeostasis. These ligand-dependent transcription factors, which belong to the nuclear receptor superfamily of transcription factors, have been targeted to fight metabolic diseases based on their metabolic regulatory activities in various tissues, in part depending on ligand selectivity. This Special Issue of IJMS will cover the singular and intricate regulatory roles of all three PPAR isotypes in the ensemble of processes that are associated with metabolism in the healthy and diseased organism.

Prof. Walter Wahli

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
