Message from the Guest Editors

Dear Colleagues,

Phage display of antibody fragments is a powerful methodology for generating recombinant affinity reagents to many protein targets. As sequenced reagents, they offer renewability and options for engineering that are commonly lacking with polyclonal and monoclonal antibodies. It is now possible to devise and implement a pipeline for developing high quality (*i.e.*, specific, dissociation constants of <10 nM) antibodies to almost any protein target for basic science research, diagnostic, and therapeutic applications. This Special Issue of the *International Journal of Molecular Sciences* will feature different aspects of a high-throughput pipeline, solutions to bottlenecks in the process, and some exciting new applications of recombinant antibodies.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
