Deadline for manuscript  
submissions:

**closed (31 December 2019)**

### Message from the Guest Editors

Considerable progresses have been made in the management of patients suffering from hematological malignancies in these past ten years, and patients now benefit from a plethora of treatments, from conventional to targeted and immunotherapies. Whatever the kind of treatment, malignant hematopoietic cells consistently develop cellular strategies to adapt and survive to therapeutic drugs. Such an adaptation may involve different molecular and cellular mechanisms, including the acquisition of mutations. In addition, the modulation of the signaling pathways involved in apoptosis, autophagy, proliferation, proteostasis, metabolism, epigenetic modifications, and the modulation of oncogenes or tumor suppressors represent additional processes which may lead to therapy-induced resistance. Other potential mechanisms of resistance arise from the tumor stromal niche. This Special Issue will encompass the ensemble of the resistance processes set up in the course of hematological malignancies treatment and the mechanisms by which alterations of these pathways can be therapeutically exploited to improve therapies.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
