Deadline for manuscript  
submissions:

**closed (15 October 2022)**

### Message from the Guest Editors

Sustainable ecosystems are an increasingly critical global goal as the human population's demands increase, and climate change. Human-made polymers have become ubiquitous and quite problematic due to their slow recycling rates and impact when leaching to the environment. To alleviate this, considerable focus has been placed on green chemistry and easily recyclable biodegradable polymers that can replace, if not improve, the functionality of longer-lived polymers. The "new biodegradable plastics" include poly(lactic acid), starch blends, poly(butylene succinate), poly(butylene-co-adipate terephthalate), and polyhydroxyalkonates. All of these "new" plastics are biodegradable by microorganisms at a measurable human scale living rate. This Special Issue focuses on the degradation strategies of microorganisms, including the biochemistry of attachment to the polymer, depolymerization, bio-assimilation, degradation rates, and methods to enhance these rates. We encourage original research submissions, critical and systematic reviews, and interdisciplinary work spanning chemistry, microbiology, and ecology, focused on deep molecular research.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
