Special Issue
Natural Killer (NK) Cells

Message from the Guest Editors

Dear Colleagues,

Natural killer (NK) cells, where discovered over 40 years ago, and are known for their spontaneous killing of foreign cells. We have made tremendous advances in the basic biology of NK cells, and, in doing so, have uncovered functional heterogeneity, plasticity and adaptivity within the lineage and are still confronted with questions concerning the precise roles of NK cells in pathogen and tumor immunity. This Special Issue on “Natural Killer (NK) Cells” will bring expert insight into these probing topics and present novel data on NK cell function in disease. We ask the experts in the field to contribute their latest research, perspective, or reviews on this fascinating and rapidly progressing topic.

Author Benefits

- **Open Access**: free for readers, with publishing fees paid by authors or their institutions.
- **High visibility**: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases.
- **Rapid publication**: manuscripts are peer-reviewed and a first decision provided to authors approximately 22 days after submission; acceptance to publication is undertaken in 8 days (median values for 2016).
