Message from the Guest Editor

Dear Colleagues,

Scars develop in the final stage of wound healing. Wound healing and scarring involves complex biological pathways, and the exact mechanisms by which they are initiated, evolved, and regulated remain to be fully elucidated. Scar-less wound healing is a major goal of medical science. To achieve this goal, it is necessary to elucidate the relevant clinical, histopathological, and molecular manifestations of scars, and to understand how these manifestations relate to each other.

This Special Issue will cover a selection of recent research topics and current review articles in the field of scar research for all kinds of tissues and organs. Experimental papers, up-to-date review articles, and commentaries are all welcome.

Prof. Dr. Rei Ogawa
Guest Editor

Author Benefits

**Open Access:** free for readers, with publishing fees paid by authors or their institutions.

**High visibility:** indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases.

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 22 days after submission; acceptance to publication is undertaken in 8 days (median values for 2016).
