and Orthopedic Sciences
(DAHFMO), Sapienza University of
Rome, Rome, Italy

Deadline for manuscript
submissions:

closed (15 December 2019)

Message from the Guest Editor

This Special Issue aims to highlight recent and current research on signalling pathways regulating skeletal muscle differentiation, histogenesis, and remodelling. Skeletal muscle is a dynamic tissue capable of responding to a large variety of physiological stimuli by adjusting muscle fiber growth, size, metabolism, and function. Numerous recent studies have expanded our knowledge of the signalling pathways regulating these processes. It is now clear that the maintenance of muscle homeostasis depends on tightly regulated processes, involving endocrine/paracrine and cell–cell contact interactions. Alterations in any of these processes can lead to unsuccessful repair following direct mechanical trauma (acute injury) or after secondary damage due to aging or genetic neuromuscular defects. On the other hand, the formation of skeletal muscle during embryonic development and postnatal life serves as a paradigm for stem and progenitor cell maintenance, lineage specification, and terminal differentiation. An integrative view of all aspects of muscle differentiation is paramount for a comprehensive understanding of muscle formation and maintenance.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
