Message from the Guest Editor

Dear Colleagues,

The scaling of experimental models tested in laboratories, such as, for example, the shaking table or wind tunnel, is an important issue that is generally neglected in papers. Authors generally describe the experimental model's construction only briefly before the experimental results discussion. In addition, authors often neglect discussing the experimental error propagation given by scaling. My proposal is to run a Special Issue on experimental model construction and error propagation. These papers will be cited often in future literature reviews.

You are invited to contribute a research article, review or short communication for consideration and publication in *Infrastructures* (ISSN 2412-3811). There is no restriction on the length of the papers. *Infrastructures* is published in open access format. The scientific community and general public have unlimited free access to the content as soon as it is published. *Infrastructures* is supported by the authors by the payment of article processing charges for accepted manuscripts. Please consider *Infrastructures* as an exceptional opportunity to publish your work.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (Construction and Building Technology) / CiteScore - Q1 (Building and Construction)
