Call for Papers

Dear Colleagues,

You are invited to contribute a research article or a comprehensive review for consideration and publication in Inorganics (ISSN 2304-6740). Inorganics is an open access journal that covers all aspects of inorganic chemistry research.

Manuscripts prepared in Microsoft Word or LaTeX can be submitted online to the Editorial Office at www.mdpi.com. Detailed instructions for authors are also available online: www.mdpi.com/journal/inorganics/instructions/

Inorganics is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Inorganics is a new journal and publication fees are fully waived for papers submitted in 2015. However, a fee of 250 CHF may apply for those articles that need major editing and formatting and/or English editing.

We would be pleased to welcome you as one of our authors.

Prof. Dr. Duncan Gregory
Editor-in-Chief

Aims & Scope

*Inorganics* publishes reviews, regular research papers (articles) and short communications. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. Therefore, there is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced.

Topics include but are not limited to:

- synthesis and characterization of inorganic compounds, complexes and materials
- structure and bonding in inorganic molecular and solid state compounds
- spectroscopic and magnetic properties of inorganic compounds
- chemical reactivity, physical properties and applications of inorganic compounds and materials
- mechanisms of inorganic reactions
- organometallic compounds
- inorganic cluster chemistry
- heterogenous and homogenous catalytic reactions promoted by inorganic compounds
- thermodynamics and kinetics of significant new and known inorganic compounds
- supramolecular systems and coordination polymers
- bio-inorganic chemistry and applications of inorganic compounds in biological systems and medicine

*Inorganics* regularly publishes special issues on relevant and timely topics. Be sure to check our website for an updated list of special issues: [www.mdpi.com/journal/inorganics/special_issues/](http://www.mdpi.com/journal/inorganics/special_issues/)
Open Access. What does it really mean?

Open access is mainly a response to what is known as the serials crisis: yearly increasing journal subscription prices, which make subscription-based journals increasingly difficult to afford.

Many university libraries around the world have had to cancel existing subscriptions, or are unable to keep up with subscribing to new journals, because the cost of publication has risen disproportionately to their budgets.

With open access publishing, the cost of peer-review and production of an article is borne by the institute of the author by payment of a one-time flat fee. Conversely, readers and their institutes are no longer charged for accessing the journals they need.

For researchers, open access brings the convenience of immediate access to the literature that they need — no matter for which university or company they work, or whether they just want to read a paper in their spare time at home.

For authors, open access means a much wider circle of readers due to the easy access to their research papers. The interested general public is also able to access research works, giving higher transparency to the outcome of taxpayer money spent on research.

Publication Ethics Statement

Inorganics is a member of the Committee on Publication Ethics (COPE). Inorganics takes the responsibility to enforce a rigorous peer-review together with strict ethical policies and standards to ensure to add high quality scientific works to the field of scholarly publication.
