

an Open Access Journal by MDPI

# **Advanced Inorganic Semiconductor Materials**

Guest Editors:

#### Dr. Sake Wang

College of Science, Jinling Institute of Technology, Nanjing, China

### Dr. Minglei Sun

Department of Physics and NANOlab Center of Excellence, University of Antwerp, Groenenborgerlaan 171, 2020 Antwerp, Belgium

### Dr. Nguyen Tuan Hung

Frontier Research Institute for Interdisciplinary Sciences, Tohoku University, Sendai, Japan

Deadline for manuscript submissions:

closed (31 December 2023)

# **Message from the Guest Editors**

The information technology revolution has been based decisively on the development and application of inorganic semiconductors. Conventional devices utilize bulk semiconductors in which charge carriers are free to move in all three spatial directions. For example, silicon forms the basis of the vast majority of electronic devices, whilst compound semiconductors such as gallium arsenide (GaAs) are used for many optoelectronic applications. Recently, with the global boom in graphene research, more and more atomically thin two-dimensional (2D) inorganic materials have gained significant interest.

This Special Issue aims to highlight the most current research and ideas in inorganic semiconductors, especially semiconductors based on 2D materials. In this Special Issue, original research articles and reviews are welcome. Research areas include, but are not limited to, the experimental fabrication and characterization, as well as the electronic, electrical, magnetic, optoelectronic and thermal properties of inorganic semiconductors.

We look forward to receiving your contributions.

Dr. Sake Wang Dr. Minglei Sun Dr. Nguyen Tuan Hung *Guest Editors*

# **Message from the Editor-in-Chief**

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and Inorganics offers authors the opportunity to publish exciting new research in an open access format.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Inorganic & Nuclear*) / CiteScore - Q2 (*Inorganic Chemistry*)
