Call for Papers

Call for Papers

Dear Colleagues,

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Insects* (ISSN 2075-4450). *Insects*, an international scientific open access journal of entomology, is published by MDPI online quarterly

Insects is an online open access journal providing an advanced forum for studies related to entomology. Manuscripts prepared in Microsoft Word or LaTeX can be submitted by e-mail to insects@mdpi.com. Detailed instructions for authors are available on the *Insects* website: www.mdpi.com/journal/insects/instructions/

Insects is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public can unlimitedly access the content for free as soon as it is published.

Insects is a new journal and publication fees are fully waived for papers submitted in 2012. However, a fee of 250 CHF may apply for those articles that need major editing and formatting and/or English editing.

We would be pleased to welcome you as one of our authors.

Aims & Scope

Insects publishes reviews, research papers and communications related to the biology, physiology and the behavior of insects and arthropods.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers.

The full experimental details must be provided so that the results can be reproduced. Electronic files regarding the full details of the experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

The scope of this journal includes, but is not limited to:

- basic and applied entomology
- biology, physiology and ecology of insects
- insects classification / taxonomy
- reproduction and development of insects
- evolution of insects
- insects and public health
- insects and environment
- insects and plants
- pest management

Insects regularly publishes special issues on relevant and timely topics. Be sure to check our website for an updated list of special issues: www.mdpi.com/journal/insects/

Open Access. What Does It Really Mean?

Open access is mainly a response to what is known as the serials crisis: yearly increasing journal subscription prices, which make subscription-based journals increasingly difficult to afford.

Many university libraries around the world have had to cancel existing subscriptions, or are unable to keep up with subscribing to new journals, because the cost of publication has risen disproportionately to their budgets.

With open access publishing, the cost of peer-review and production of an article is borne by the institute of the author by payment of a one-time flat fee. Conversely, readers and their institutes are no longer charged for accessing the journals they need.

For researchers, open access brings the convenience of immediate access to the literature that they need—no matter for which university or company they work, or whether they just want to read a paper in their spare time at home.

For authors, open access means a much wider circle of readers due to the easy access to their research papers. The interested general public is also able to access research works, giving higher transparency to the outcome of taxpayer money spent on research.
