Message from the Guest Editors

Dear Colleagues,

“Diagnosis, Treatment, and Genetics of Cardiomyopathy” is a Special Issue of the Journal of Cardiovascular Development and Disease (JCDD) that focuses on the comprehensive understanding and management of cardiomyopathy, a complex group of heart muscle diseases.

Within this Special Issue, experts contribute original research articles, review papers, and case studies that delve into various topics related to cardiomyopathy. The aim is to provide a comprehensive overview of the identification and classification of different subtypes, novel diagnostic techniques, advances in treatment strategies, and insights into the genetic factors contributing to the development and progression of the disease.

Moreover, this Special Issue features discussions on emerging therapies, clinical trials, and translational research, fostering the translation of scientific discoveries into practical applications in clinical settings. By disseminating cutting-edge research findings and evidence-based practices, the Special Issue aims to advance the understanding of cardiomyopathy and improve patient outcomes.
