Message from the Guest Editor

Dear Colleagues,

Sports cardiology is a developing specialism that integrates the prevention, diagnosis, and management of individuals involved in sport and exercise. This transcends other cardiology disciplines including inherited and acquired cardiac conditions; hence, there are important multi-disciplinary and modality applications. This Special Issue aims to provide a platform for high-quality publications related to the discipline of sports cardiology. We welcome submissions from original research, case reports, and review articles that highlight the current and evolving areas of this specialism. These can include but are not restricted to diagnostics, screening, secondary care, and management of those individuals involved in structured exercise.
