Deadline for manuscript  
submissions:

**15 July 2024**

### Message from the Guest Editors

Dear Colleagues,

In the last decade, the field of cardiothoracic imaging has seen the rapid growth of many innovative technologies. Cardiovascular imaging indices, including those based on modern advanced technology, significantly influence heart disorders' prevention, diagnosis, and treatment options. This Special Issue seeks submissions to expand the understanding and highlight the clinical importance of emerging or changing technologies, guidelines, and expert recommendations in cardiovascular imaging. A combination of research papers, case series including exciting images, and reviews aims to highlight significant developments across all the cardiovascular imaging techniques we deal with, i.e., echocardiography, nuclear techniques, cardiovascular magnetic resonance, cardiac computed tomography, and others.
