Message from the Guest Editor

Dear Colleagues,

Several thousand reports detail information concerning potential causes of Alzheimer's dementia (AD). Surely, a cure for this form of dementia must be attainable, which is why a Special Issue of the *Journal of Clinical Medicine* invites articles showing potential cures. Curing any medical condition has two generic approaches. The first treats all of the possible causes that contribute to pathogenesis; this requires dozens of drugs. AD may have >15 possible causes requiring >30 drugs, which could be administered sequentially in small numbers over a long period of time. Most of the few articles published about curing AD have proposed that approach. However, AD clearly has multiple causes, and these may differ from patient to patient, so a 'one size fits all' approach might be incorrect. A second approach avoids this by identifying, for each separate patient, only those components of pathogenesis that are actually operative. Articles using either approach are welcome.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*) / CiteScore - Q1 (*General Medicine*)
