Message from the Guest Editors

Dear Colleagues,

Thrombocytopenia encompasses a diverse range of conditions, ranging from acquired to constitutive. With the availability of high throughput molecular techniques, new insights into the etiology of immune and inherited thrombocytopenia syndromes have markedly improved our ability to diagnose and counsel patients accurately and promise to aid in the development of novel therapeutics.

This Special Issue of the Journal of Clinical Medicine will cover the following important aspects of this field:

- Molecular understanding of thrombopoiesis
- Molecular basis of inherited platelet defects
- Leukemia predisposition in inherited thrombocytopenia syndromes
- Mechanisms of immune dysregulation in immune thrombocytopenia
- New therapeutic developments

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science) and EMBASE. Citations available in Pubmed, full-text archived in PubMed Central.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 31 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
