### Message from the Guest Editors

The applications of minimally invasive endodontics have been continuously expanding, enabling accurate diagnostic tests, conservative access cavities, conservative shaping with the latest generation of rotating files, powerful 3D irrigation systems, and more.

In the past few months, we published the Special Issue “The State of the Art in Endodontics”. The second installation of this Special Issue will focus on recently developed techniques and protocols in endodontics. Original articles, short communications, and review articles are all welcome.
