Message from the Guest Editor

Dear Colleagues,

Risk Management is an important issue for economics and management researchers. Intelligent information processing (IIP) methods can be useful tools for managing and controlling risks. The main topics of IIP are multi-agent systems, automatic reasoning, big data mining, cloud computing, cognitive modeling, computational intelligence, deep learning, evolutionary computation, information retrieval, knowledge-based systems, knowledge engineering, machine learning, natural language processing, neural computing and web intelligence. Risk management based on IIP theory, system, modeling and simulation are hot topics for future research. We encourage researchers, teachers, students, engineers, academicians as well as industrial professionals from all over the world to present their current insights in this special issue.

Author Benefits

- **Open Access:** free for readers, with publishing fees paid by authors or their institutions.
- **High visibility:** Indexed in the Emerging Sources Citation Index (ESCI - Web of Science) and EconLit (AEA).
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 49 days after submission; acceptance to publication is undertaken in 12 days (median values for papers published in this journal in 2016).
