Message from the Guest Editors

The scope of the special issue includes approaching *H. pylori* infection from a new perspective of multidisciplinary approach. The carcinogenic role of infection is well known but the mechanisms of production are still poorly understood. From this perspective, we want to reconsider the role of oxidative stress in oncological pathology as well as other cellular mechanisms that have the potential to induce cancer. Another objective is to evaluate the role of new diagnostic methods in terms of their sensitivity and specificity
