Message from the Guest Editor

Dear Colleagues,

This Special Issue will include both primary research and review articles covering anti-infective agents discovered in marine organisms. These anti-infective agents may be antibacterial, antifungal, antiprotozoan, antitubercular, and antiviral agents. These marine compounds may directly interfere with microbial replication, block virulence (e.g., quorum sensing antagonists), or reverse multidrug resistance. Primary research articles must include full characterization (proton NMR, carbon-13 NMR, and high resolution mass spectral data) of all new compounds. Review articles must cite peer-reviewed literature from five years prior to the year of publication, e.g., a 2015 review should cite articles published from 2010-2014.

Prof. Dr. Miguel O. Mitchell
Guest Editor

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.
High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Embase, Scopus, MarinLit and other databases. Full-text available in PubMed Central.
Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 8 days (median values for papers published in this journal in 2016).
