Message from the Guest Editor

Dear Colleagues,

Fungi from marine habitats continue to provide a prolific resource for natural product discovery. Current research in marine fungal natural product discovery focuses on topics ranging from the isolation of new fungal taxa to the isolation and characterization of new compounds. Additionally, with the growing awareness of the presence of cryptic natural products in fungal genomes, efforts are underway in numerous labs to develop new methods to induce the expression of such compounds. The goal of this Marine Drugs Special Issue is to assemble a collection of research articles outlining progress in these interrelated disciplines.

Author Benefits

- **Open Access**: free for readers, with publishing fees paid by authors or their institutions.
- **High visibility**: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Embase, Scopus, MarinLit and other databases. Full-text available in PubMed Central.
- **Rapid publication**: manuscripts are peer-reviewed and a first decision provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 8 days (median values for papers published in this journal in 2016).
