and Environmental Engineering,  
Politehnica University Timisoara,  
Victoriei Square no. 2, 300006  
Timisoara, Romania

### **Dr. Mihaela Ciopec**

Applied Chemistry and  
Engineering of Inorganic  
Compounds and the  
Environment, Politehnica  
University Timisoara, 300006  
Timisoara, Romania

Deadline for manuscript  
submissions:

**closed (31 July 2020)**

### **Message from the Guest Editors**

The rapid development of human society over the last hundred years has resulted in a sharp increase in the number and amount of pollutants emitted into the environment, leading to severe imbalances. Simultaneously, an important technological advance has been observed which allows us to recover pollutants and remediate the environment.

Exploitation and conversion of natural resources in raw materials, used by various industries, leads to the apparition of environmental pollution. Broad diversification of industrial products used for improvement of our living conditions is responsible for most pollutant emissions. In this context, it is important to produce suitable materials (adsorbents, catalysts, and so on) to reduce the pollutant amount discharged into the environment. It is vital to properly characterize the produced materials in order to establish a correlation between material structure (microstructure) and its properties. Such a correlation is being established using different scanning characterization techniques: scanning electron microscopy, scanning probe, optical microscopy, and X-Ray diffraction.

an Open Access Journal by MDPI

## Editor-in-Chief

### Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

## Message from the Editor-in-Chief

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
