Message from the Guest Editor

Dear Colleagues,

The subject of fractional calculus (that is, calculus of integrals and derivatives of any arbitrary real or complex order) has gained considerable popularity and importance during the past four decades and longer, due mainly to its demonstrated applications in numerous seemingly diverse and widespread fields of science and engineering. It does indeed provide several potentially useful tools for solving differential, integral and integro-differential equations, and various other problems involving special functions of mathematical physics as well as their extensions and generalizations in one and more variables. Both review, expository and original research articles dealing with the recent advances in the theory fractional calculus and its multidisciplinary applications are invited for this Special Issue.

Prof. Dr. Hari M. Srivastava

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.

High visibility: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science) and Zentralblatt MATH.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 45 days after submission; acceptance to publication is undertaken in 10 days (median values for papers published in this journal in 2016).
