Deadline for manuscript submissions: closed (31 August 2017)

Message from the Guest Editor

Dear Colleagues,

In this Special Issue of Metabolites, original papers, which are describing novel metabolomics methods for the diverse nature of environmental samples from the terrestrial to the marine realm, are welcome. Work which shows new directions of metabolomics applied to monitor environmental factors (abiotic or biotic) towards populations of organisms is of interest for this Special Issue. Comprehensive descriptions of metabolome data, either from extracts or via direct MS imaging studies are welcome here. Manuscripts dealing with other challenging issues in the environmental metabolomics field including software tools and databases for metabolite annotation or combination with other -omics are also highly welcome.

Author Benefits

- **Open Access**: free for readers, with article processing charges (APC) paid by authors or their institutions.
- **High visibility**: Indexed in the Emerging Sources Citation Index (ESCI - Web of Science), EMBASE (Elsevier) and Scopus. Citations available in PubMed, full-text archived in PubMed Central.
- **Rapid publication**: manuscripts are peer-reviewed and a first decision provided to authors approximately 19.5 days after submission; acceptance to publication is undertaken in 4 days (median values for papers published in this journal in first half of 2017).
