Message from the Guest Editor

Dear Colleagues,

Since its invention in the late 1960’s, and the pioneering work on metal strengthening in USA during the late 1970’s, Laser Shock Processing has become a reliable surface treatment for improving the mechanical or corrosion resistance of metallic materials. This Special Issue on LSP aims to provide a rather exhaustive and up-to-date state of the art on LSP. Based upon recent work, the Special Issue covers the following fields: the physics of the process and shock loading conditions, the surface modifications induced by LSP, the modeling of LSP, the fatigue and corrosion properties of peened surfaces, the industrial applications of LSP, and novel applications for laser-induced shock waves.

Prof. Dr. Patrice Peyre
Guest Editor

Author Benefits

Open Access: free for readers, with low publishing fees paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science) and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
