Deadline for manuscript
submissions:

closed (15 December 2018)

Message from the Guest Editor

Dear Colleagues,

High-energy radiation involving neutrons, ions, and electromagnetic waves can alter the microstructure and properties of metallic materials in a variety of ways.

We invite papers reporting significant original research, as well as reviews on radiation effects in metals alloys and metallic multilayers, including experiments using both ion beam and neutron irradiation as also radiation by X-rays and lasers.

The subjects of interest for this Special Issue include, but are not limited to:

- Effects of radiation on (a) microstructure, (b) mechanical properties of metallic materials
- Methods of characterizing radiation effects, including transmission and scanning electron microscopy, SANS, synchrotron radiation, X-ray diffraction, etc.
- Theoretical calculations and simulations of radiation effects on materials, including molecular dynamics, ab initio, Monte Carlo, finite elements, etc.

Dr. Dhriti Bhattacharyya

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **Inspec**, **Ei Compindex**, **CAPLus / SciFinder**, and **other databases**.

Journal Rank: JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
