Call for Papers

Call for Papers

Dear Colleagues,

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Nutrients* (ISSN 2072-6643). *Nutrients* is an online open access journal of food science and nutrition.

Manuscripts prepared in Microsoft Word or LaTeX can be submitted to the Editorial Office online at www.mdpi.com. Detailed instructions for authors are also available online:

www.mdpi.com/journal/nutrients/instructions/

Nutrients is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public can unlimitedly access the content for free as soon as it is published.

As an open access journal, *Nutrients* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. More information is available at www.mdpi.com/about/apc/.

We would be pleased to welcome you as one of our authors.

Aims & Scope

Nutrients publishes reviews, regular research papers and short communications. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. There are, in addition, unique features of this journal:

- manuscripts regarding research proposals and research ideas will be particularly welcomed
- electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material
- we also accept manuscripts communicating to a broader audience with regard to research projects financed with public funds

The scope of *Nutrients* includes:

Macronutrients, micronutrients, essential nutrients, bioactive nutrients, nutrient requirements, nutrient sources, plant products, animal products, marine products, sustainability, human nutrition aspects, functional foods, nutraceuticals, health claims, diet-related disorders, metabolic syndrome, malnutrition, nutritional supplements, functional foods, nutraceuticals, health claims, diet-related disorders, metabolic syndrome, malnutrition and nutritional supplements

Nutrients regularly publishes special issues on relevant and timely topics. Be sure to check our website for an updated list of special issues: www.mdpi.com/journal/nutrients/

Open Access. What Does It Really Mean?

Open access is mainly a response to what is known as the serials crisis: yearly increasing journal subscription prices, which make subscription-based journals increasingly difficult to afford.

Many university libraries around the world have had to cancel existing subscriptions, or are unable to keep up with subscribing to new journals, because the cost of publication has risen disproportionately to their budgets.

With open access publishing, the cost of peer-review and production of an article is born by the institute of the author by payment of a one-time flat fee. Conversely, readers and their institutes are no longer charged for accessing the journals they need.

For researchers, open access brings the convenience of immediate access to the literature that they need – no matter for which university or company they work, or whether they just want to read a paper in their spare time at home.

For authors, open access means a much wider circle of readers due to the easy access to their research papers. The interested general public is also able to access research works, giving partly higher transparency to the outcome of taxpayer money spent on research.
