Message from the Guest Editor

Certainly, the inspiration of mixing solid nanoparticles within conventional fluids is an innovative idea that has established a new field of research with applications from heat transfer to bioengineering. In general, nanofluids are utilized in a plethora of areas such as nuclear reactors, microelectromechanical systems, heat exchangers, energy storage systems, wastewater decontamination and drug delivery, to mention but a few. In some of these cases, externally imposed electric and magnetic fields are applied to promote or delay motion and stability, to increase diffusion, to control chemical reactions and heat transfer, etc. This Special Issue of *Micromachines* is dedicated to recent advances in micro/nanofluids physics and technology under magnetic/electric fields.

Editor-in-Chief

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q2 (*Mechanical Engineering*)
