submissions:

20 December 2024

Message from the Guest Editor

Dear Colleagues,

This Special Issue is a continuation of our 2022 Special Issue, "Epidemiology of *Leptospira* sp. Infection: Current Status, Insights and Future Prospects".

Leptospirosis is an emerging zoonosis. The etiologic agent belongs to the order Spirochaetales, family Leptospiraceae and genus *Leptospira*. It affects several animal species causing great economic losses in livestock, and the negative effects of the disease on the productive and reproductive indices of ruminants are well known.

This Special Issue aims to address the current status, insights and future prospects on the epidemiology of *Leptospira* sp. infection, with a broad emphasis on the relevant aspects such as a deeper understanding of the biodiversity of strains that can lead to infections in both humans and animals, molecular epidemiology, improvement of diagnostic methods and new epidemiological insights.

I look forward to receiving your contributions.

Dr. Sérgio Santos De Azevedo

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
