Petersburg, Russia

Deadline for manuscript
submissions:

30 November 2024

Message from the Guest Editors

The geochemical characteristics of environments can be developed from geochemical studies of sedimentary rocks. Different geochemical indicators can be used for the paleoenvironmental reconstruction of processes of sedimentation. Trace and major elements in sedimentary rocks are extremely sensitive to paleoenvironmental changes, making them informative when studying the paleoclimate, paleoenvironment, as well as ancient and modern anthropogenic activity. The distribution of pollutants in sediments is important for modern geoecological processes. Isotopic research into sediments is essential for performing paleoreconstructions, geochronology, and ecology.

For this Special Issue, we invite authors to submit papers on topics related to geochemistry, mineralogy, and geochronology of natural and anthropogenic sediments and environmental conditions of their formation. We also welcome contributions that address the application of different analytic methods in the study of geochemistry and the mineralogy of sediment processes.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
