Hydrothermal Fluid and Metal Transportation: Fluid Inclusions and Ore-Forming Process

Guest Editors:

Prof. Dr. Yuling Xie

School of Civil and Resource Engineering, University of Science and Technology Beijing, Beijing 100083, China

Dr. Simon Dominy

Camborne School of Mines, University of Exeter, Penryn, Cornwall TR10 9FE, UK

Prof. Dr. Richen Zhong

School of Civil and Resource Engineering, University of Science and Technology Beijing, Beijing 100083, China

Deadline for manuscript submissions: closed (30 April 2023)

Message from the Guest Editors

This Special Issue is organized into four sections:

Section 1. Describe the characteristics and evolution of oreforming fluids: analytical methods, data analysis, and case studies of hydrothermal deposits are discussed.

Section 2. Describe alteration and its application to exploration: case studies, mechanics of the formation of hydrothermal alteration, and its application to exploration are discussed.

Section 3. Describe experimental and thermodynamic simulations of hydrothermal fluids: The solubility of metals in hydrothermal fluids, element speciation in aqueous fluids, the ligand of metal transportation, and the geochemical modeling of hydrothermal fluids are discussed.

Section 4. Describe controls and mechanisms of fluid flow: structural and lithological controls, controls to grade distribution, and ore shoot/pay zone formation are discussed.

This Special Issue aims to present the role of hydrothermal fluids during the formation of mineral deposits and the mechanisms of element dissolution and precipitation.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases. **Journal Rank:** JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
