Message from the Guest Editors

Dear Colleagues,

Industrial minerals are any rocks or minerals with economic value used in industrial processes or technical applications that are not used as sources for metals, gemstones, or energy. Many different types of industrial minerals and geomaterials serve multiple uses. Some examples of applications for industrial minerals are construction, ceramics, paints, electronics, filtration, plastics, glass, detergents, and paper. Industrial minerals are fundamental to the economy; some are considered critical minerals essential to the economies and security of nations.

The evaluation of raw materials, in order to determine their suitability for use as industrial minerals, requires technical test work, mineral processing trials, end product evaluation, and, in particular, scientific studies on the compositional as well as chemical–physical characteristics of geomaterials. Therefore, for these reasons, research that can contribute to and deepen the knowledge of industrial minerals/geomaterials and their applications with a full view to environmental sustainability are welcome to this Special Issue.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
