Message from the Guest Editor

Dear Colleagues,

The mineralogy of gold and other noble metals is very diverse. The articles published in the Special Issue of 2019 do not cover all the stated problems of the specified topic and, hence, it is expedient and relevant to continue it and release a 2nd volume. At present, a significant part of the reserves of gold and other noble metals are primary deposits of sulfide ores. Many sulfide ores are referred to as refractory ores by technologists. Knowledge of the mineralogy of these ores, including data on their own minerals (micro, nano-) and invisible forms of noble metals, is the key factor in developing rational schemes of their processing and enrichment. The aim of the new volume is to attract the attention of researchers from many fields to gain new knowledge for solving fundamental and applied tasks.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
