Message from the Guest Editor

Dear Colleagues,

Carbon-based materials, historically, have played a dominant role in expanding science as well as technology. Specifically, carbon nanotube research has grown immensely during the last several decades, with indications that these materials can lead to groundbreaking solutions to several global problems related to energy, environment, electronics, biomedical science, smart composites, etc. In this context, the present Special Issue aims to focus on the latest development and discoveries in the field of carbon nanotube based materials, and will try to capture the immense advancement that has been achieved, both in our fundamental understanding of these materials, as well as potential future technological breakthroughs that might emerge from such understanding.

Author Benefits

Open Access: free for readers, with publishing fees paid by authors or their institutions.
High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases.
Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 19 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in this journal in 2016).
Sections: published in twelve topical sections.
