Engineering of Aerogels and Their Applications

Guest Editors:

Dr. Carlos A. García-González

Department of Pharmacology, Pharmacy and Pharmaceutical Technology, University of Santiago de Compostela, 15782 Santiago de Compostela, Spain

Dr. Luísa Durães

Chemical Process Engineering and Forest Products Research Centre, Department of Chemical Engineering, University of Coimbra, 3000-370 Coimbra, Portugal

Deadline for manuscript submissions:

closed (30 June 2019)

Message from the Guest Editors

Dear Colleagues,

Aerogels are a unique class of light-weight nanoporous materials of interest in advanced applications for different fields. Interest on aerogels prompted the design and development of materials from different sources (inorganic, organic, hybrid), formats (monoliths, beads, powder). chemical functionalities (hvdrophilic. hydrophobic) and sizes (insulation boards, micron-sized particles). This material's research pace was aligned with the engineering of innovative and viable processes and unit operations to tackle the production of the evergrowing demand of aerogel quantities and varieties. Recently, the research on aerogels has particularly grown to target environmental and biomedical applications with the prospect of novel aerogel sources (biopolymers, biomass), innovative composite materials containing aerogels and environmentally friendly processing approaches.

This Special Issue aims to assemble notable recent contributions on the engineering of aerogels in terms of sources, chemical functionalities and morphology as well as process design and optimization with a clear application-oriented focus.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous*))
