Deadline for manuscript  
submissions:

**closed (31 May 2023)**

### Message from the Guest Editors

Dear Colleagues,

Boron is known to have a large number of allotropes. Boron compounds and boron nanomaterials are also known to show polymorphs because, compared to other compounds, they form a wide variety of chemical bonds with each other. Thus, there are several important research subjects in theoretical, computational, and experimental physics and chemistry. A recent example is the realization of two-dimensional planar boron nanomaterials (borophene), showing polymorphisms as expected. This Special Issue aims to provide a forum for the dissemination of the latest information on boron allotropes, compounds, and nanomaterials.

Dr. Takahiro Kondo

Prof. Dr. Iwao Matsuda

Dr. Josep M. Oliva-Enrich

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
