Message from the Guest Editors

Dear Colleagues,

Lectins are a class of carbohydrate binding proteins of tremendous importance as attested to by the voluminous literature. They are produced by different organisms ranging from microbes to humans. These proteins display a diversity of structures, carbohydrate binding specificities, and functions.

The current Special Issue is devoted to reviewing published results as well as presenting original data on the classification and families, carbohydrate binding activity, characteristics, functions, production and applications of lectins of different origins.

Lectin researchers are invited to contribute articles to this Special Issue. The themes include, but are not limited to, those indicated by the keywords below.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 4 days (median values for papers published in this journal in first half of 2017).

Sections: published in twelve topical sections.
