Message from the Guest Editor

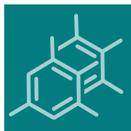

Dear Colleagues,

The synthetic applications based on metathesis processes have received a huge attention over the past years. It has been an exciting adventure that will continue in the future based on the improvement in catalyst activity, tolerance and selectivity. New commercial and academic applications can be envisioned and the number of total synthesis of natural products based on these methodologies increases more and more. Ring closing metathesis (RCM) is an atom-economical reaction, compatible with many functional groups and allows the construction of rings of practically any size including macrocycles. This special issue of *Molecules* will include new exciting contributions in RCM chemistry.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 14 days after submission; acceptance to publication is undertaken in 4.96 days (median values for papers published in the first six months of 2018).
