Message from the Guest Editor

Dear Colleagues,

It has long been known that lipid metabolism is impaired in obesity and type 2 diabetes, however, the effect of specific fatty acids is still hotly debated. It is clear that not all fatty acids within a particular class are equal with regard to metabolic function and this Special Issue “Fatty Acids in Obesity and Type 2 Diabetes” welcomes review or original articles that advance our knowledge in this field. Articles that address the fact that fatty acids are not consumed in isolation, but in the context of complex foods would be particularly appreciated.
