Message from the Guest Editor

Dear Colleagues,

With the increasing importance of biopharmaceuticals and their frequent inherent instability in the presence of water, pharmaceutical scientists have to consider the preparation of a dry formulation in order for the product to be safe and stable. For the gentle removal of solvent, freeze-drying and spray-drying are two commonly applied unit operations. Although both processes are long-established in pharmaceutical and other industries, actual product development is still often based on tradition or trial-and-error approaches, rather than on a conscious and rational design.

In the light of quality-by-design, a more thorough understanding of the interplay between the active ingredient and the critical formulation and process parameters is necessary. Understanding a system all the way—from its molecular interactions to the intermediate and bulk properties and the final dosage form—will ensure the highest quality.

This Special Issue serves to highlight the most recent developments and findings in the understanding of both freeze-drying and spray-drying.

Message from the Editor-in-Chief

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
