Message from the Guest Editors

Dear Colleagues,

Microfluidics is a technology that allows precise control and manipulation of very small fluid flows, which translates to small amounts of reagents used more simply, and faster. The technologies are key in the development of novel applications in different fields, including drug discovery, drug delivery, in vitro diagnostics, chemical analysis and high-throughput screening. In the field of drug delivery, for example, micro and nanoparticle (e.g., polymeric, lipid) drug delivery systems provide superior control over the physicochemical characteristics of the final product. This Special Issue will address the new developments in the area of Microfluidics, including the development of efficient drug carrier particles, as rapid techniques for direct drug screening (e.g., plasma drug level monitoring), for dilution or mixing of pharmaceutical chemical reagents, and the formulation of microfluidic systems with self-contained reservoirs that provide continuous drug release over an extended period. Original research papers and review articles are welcomed.

Message from the Editor-in-Chief

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1 (*Pharmaceutical Science*)
