Deadline for manuscript submissions:
5 August 2024

Message from the Guest Editors

The model-based engineering solution framework for electric vehicle battery packs encompasses three crucial components: battery management, battery modeling, and battery optimization.

Battery management processes (BMPs) encompass a diverse set of techniques and procedures meticulously designed to enhance battery performance, efficiency, and overall lifespan.

Battery modeling, a fundamental aspect of the framework, encompasses a variety of approaches such as computational fluid dynamics (CFD), electro-thermal models, circuit models, and surrogate or neural network models.

In parallel, battery optimization aims to achieve real-time adaptivity, cost analysis, model predictive control, and multi-objective optimization.

By synergizing battery management, modeling, and optimization, this comprehensive framework serves as a sophisticated foundation for advancing electric vehicle battery technology. It enables manufacturers and researchers to create cutting-edge battery solutions, ensuring electric vehicles are safer, more efficient, and more reliable, thus propelling the widespread adoption of sustainable transportation.

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus,
SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.
Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
