### Message from the Guest Editors

The Special Issue reports novel developments in drug delivery strategies using carbohydrate polymers. Examples of carbohydrate polymers include, but are not limited to, pectin, alginate, cellulose, chitosan, xanthan, acacia, and carrageenins. Furthermore, research and review articles with a specific interest in developing carbohydrate-based drug delivery systems addressing the following areas will be considered:

- Novel cross-linking and encapsulation processes;
- Treating particular diseases where carbohydrate polymers are vital in delivering the drug to the target site;
- Improving the dissolution and bioavailability of drugs;
- Addressing and resolving drug delivery issues;
- Modifying carbohydrate polymers to achieve desirable properties in drug delivery.

## Message from the Editor-in-Chief

*Processes* (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
